

FileAudit®

Windows® File System Auditing. The easy way.

Addressing a key gap in native Windows security, **FileAudit makes monitoring, auditing and securing files and folders intuitive and easy.** Protect your most sensitive files and confidential information stored on Windows servers.

Key Benefits

- ✓ Significantly reduce the workload related to monitoring access to sensitive files and folders
- ✓ Enforce compliance with major regulations such as SOX, FISMA and HIPAA
- ✓ Perform accurate IT forensics
- ✓ Powerful security control for Windows Networks to thwart insider attacks
- ✓ Respond instantly to emergency situations

The challenge

Increasing mobility and remote working trends can make it challenging for IT to protect sensitive data and ensure compliance with industry regulations. Manually monitoring and auditing file access (and access attempts) across Windows Servers is time-consuming and overwhelming.

The solution

With a simple, agentless deployment, IT managers can quickly install FileAudit and instantly protect all file servers in their Windows environment without intrusion or the typical cost and effort of installation and maintenance on individual servers. Users can be up and running with FileAudit and monitoring, archiving and reporting on file access in less than three minutes.

Its touch-ready user interface is comprised of "live tiles" which link to the solution's features and update in real-time. **It makes auditing faster, smarter and more efficient** – regardless of whether users are working on PCs, laptops or tablets.

About IS Decisions

IS Decisions is a global software company specializing in Security & Access Management solutions for Microsoft Windows and Active Directory. More than 3,000 customers around the world rely on IS Decisions software and include:

File and Folder Real-Time Activity Monitoring

FileAudit constantly examines and records read/write/delete access (or access attempts), file ownership changes and permission modifications, so IT or management can immediately address any inappropriate accesses.

Customized File Server Intelligence

Ensure security with interactive at-a-glance access reports of everything that's happening with audited data. Provide specified recipients with regular email delivery of reports customized according to multiple criteria (e.g. path, file type, access type) for auditing and regulatory compliance.

Automatic Email Alerts to File and Folder Activity

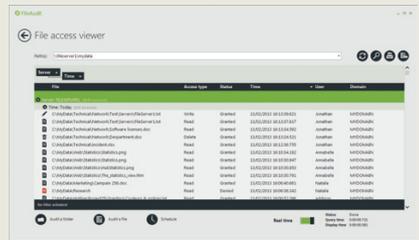

Receive automatic email alerts triggered by predetermined access events (e.g. access denied, file deletion, specific user or file access, etc.)

Centralization, Recording and Long-Term Archiving

Centralize and archive all file access events occurring on one or several Windows systems to generate an always-available, searchable and secure audit trail.

Ease of use and user-specific rights management

Create specific accounts for people with no administrative rights (external auditors, non-IT executives, etc.), allowing them to perform audits securely and autonomously.

Ease of Use & Enterprise Value

 Easy setup
Install in less than 3 minutes

 Agentless, remote and non-intrusive
Protect all file servers in a Windows environment without intrusion

 Performance and scalability
Optimize the audit to keep only relevant access events (approx. 30%) for monitoring.

 Automated audit configuration
Automatically configure the auditing of selected files and folders

 Intuitive & Easy to use
Modern, intuitive and touch-ready user interface

 Powerful filtering capabilities
Exclude irrelevant data and focus only on insightful information

 Certification & Compliance
Microsoft-certified for compliance & support with Windows Server 2012 and Windows 8.
